

Applications and devices

holbrook
telecom limited

Desktop

Our patented desktop app puts you in control of how you communicate. Real time presence means you will never miss a call again. Users can manage their entire estate through the single user client interface and can twin it with a desk phone or use it solely as a softphone.

Mobile

The Xelion mobile app provides instant access whilst on the move. Perfect for remote, hybrid, and mobile teams. Users can experience all the same popular features as they would with the desktop app, including click to dial, wallboards and chat. When dialling through the app, users can even present their business number, keeping communication professional and consistent.

Hardware

Xelion supports a wide range of devices, providing you with the tools to communicate where and how you want. Devices are unlimited and each user is allowed as many devices as they need under a single user licence, providing the ultimate flexibility in communication.
