

Microsoft integration

Microsoft 365 and Teams integrator is free of charge for all Xelion users as standard, allowing users the ability to choose which elements to integrate depending on their needs.

Azure AD

Azure AD integration enables Xelion users to login using their MS 365 logins. It also enables auto provisioning of new staff members and single sign on.

Calendars

Calendar synchronisation pulls your Outlook schedule into your Xelion account, enabling real time changes to your Xelion status based on the meeting and activity in your Outlook calendar.

Contacts

Contacts are automatically added from your Outlook address book straight to your Xelion address book through contact synchronisation, making it simple and easy to search and call any contact.

Teams integrator

The Xelion Teams integrator seamlessly connects your Teams desktop app to the Xelion platform, and there is no need for any additional Xelion or Microsoft licenses for Teams users to enable this integrator.

Our Teams plugin gives each user full access to the Xelion address book, a dial pad within Teams, and click to dial.

Teams direct routing

Xelion Direct Routing includes all the standard Xelion features. Direct routing is needed if a user wants to make standalone telephone calls within Teams.

Xelion Direct Routing fully integrates the Teams desktop app with the Xelion platform. (An additional charge will be applied for Direct Routing).
